

NOVEMBER 2025

OPEN

TOURS OPERATE DAILY
MONDAY - SUNDAY

TOURS COMMENCE
FROM 10:00PM

COMMAND DECK UPDATE

Buckle up, star travelers this month is an exciting one, with major astrological events ahead. Check out some of our highlights coming up this month below:

- **NOV 5: SUPER BEAVER MOON**

November's Full Moon is traditionally called a Beaver Moon, after beavers that build their dams during this time of the year. In 2025, it is also the first of two Supermoons.

- **NOV 17/18: LEONID METEOR SHOWER**

The Leonids shooting stars are visible from around November 6 to 30. They usually peak around November 17/18, with up to 15 meteors per hour.

- **NOV 20: MICRO NEW MOON**

The New Moon phase is the best time to explore the night sky. This is the one-and-only Micro New Moon of 2025 — meaning the Moon is near its farthest point from Earth!

ENQUIRE NOW

NOTABLE CELESTIAL STANDOUTS

ORION NEBULA

The Orion Nebula is the ultimate space daycare, where thousands of baby stars are busy being born and throwing off cosmic glitter! Just 1,300 light-years away, it hangs in Orion's sword, glowing pink-and-purple cloud you can easily spot in the sky with your naked eyes...

BETELGEUSE

Betelgeuse is our drama queen of the night sky — a colossal red supergiant that sometimes throws cosmic tantrums! If it sat where our Sun is, it would swallow Mercury, Venus, Earth, Mars, and maybe even Jupiter. A few years ago, it mysteriously dimmed...

SIRIUS

Sirius is our diva of the night sky — the brightest star out there, shining nearly 25 times brighter than our Sun and only 8.6 light-years away! Known as the Dog Star, it's the sparkling heart of Canis Major, Orion's trusty and loyal cosmic companion...
